

Android Phones

Use a pin, password or pattern to lock your phone.

Setting this up is easy: On many Android devices, go to your Location & Security Settings for instructions. On phones equipped with Android 4.0. You can even set the phone to recognize your face and unlock the screen. You can also adjust the delay before the security lock turns back on.

Password Options – Android Phones

1. From the home screen, select the **applications tab**.
2. Select **Settings**.
