

# How to secure iPhone with a Passcode and Auto-Lock

Open up Settings

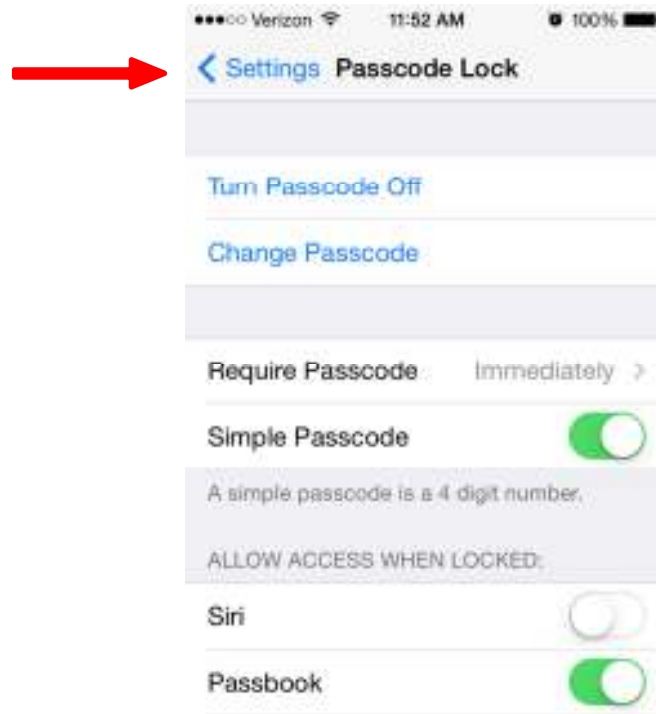

Scroll down, then click on Passcode (1), then click on Turn Passcode On (2)

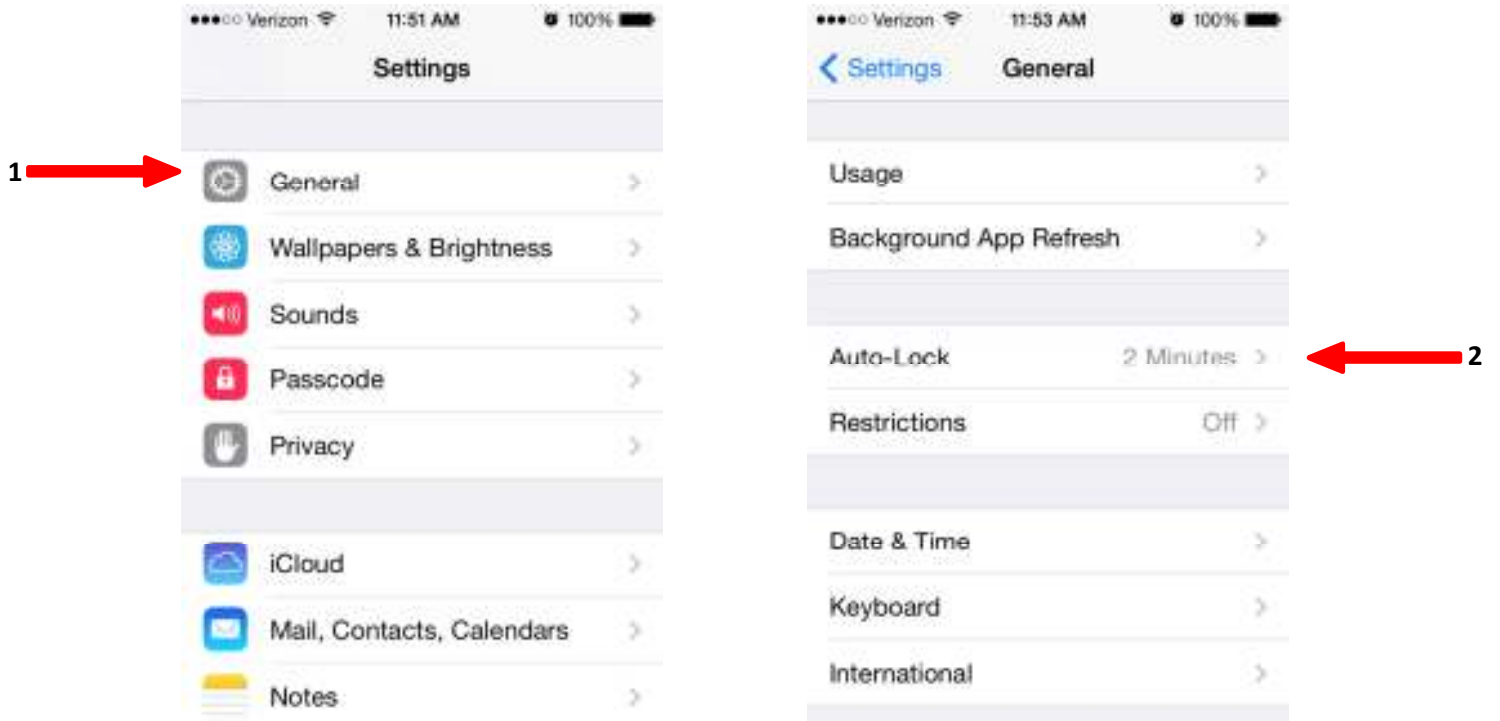

Choose and enter a passcode when prompted as shown below. You will have to enter this twice. Do not forget this passcode as your iPhone will be locked if you forget it.

Click on *Settings* to go back to main Settings screen

Next, click on *General* then select *Auto-Lock* to set a time for your iPhone to lock itself after a period of inactivity. Two minutes is recommended.

After increasing the security on your iPhone, below is the screen where you will enter the passcode to use your iPhone.
